Company of One Paul Jarvis 2019 What if the real key to a richer and more fulfilling career was not to create and scale a new start-up, but rather, to be able to work for yourself, determine your own hours, and become a (highly profitable) and sustainable company of one? Suppose the better--and smarter--solution is simply to remain small? This book explains how to do just that. Company of One is a refreshingly new approach centered on staying small and avoiding growth, for any size business. Not as a freelancer who only gets paid on a per piece basis, and not as an entrepreneurial start-up that wants to scale as soon as possible, but as a small business that is deliberately committed to staying that way. By staying small, one can have freedom to pursue more meaningful pleasures in life, and avoid the headaches that result from dealing with employees, long meetings, or worrying about expansion. Company of One introduces this unique business strategy and explains how to make it work for you, including how to generate cash flow on an ongoing basis. Paul Jarvis left the corporate world when he realized that working in a high-pressure, high profile world was not his idea of success. Instead, he now works for himself out of his home on a small, lush island off of Vancouver, and lives a much more rewarding and productive life. He no longer has to contend with an environment that constantly demands more productivity, more output, and more growth. In Company of One, Jarvis explains how you can find the right pathway to do the same, including planning how to set up your shop, determining your desired revenues, dealing with unexpected crises, keeping your key clients happy, and of course, doing all of this on your own.

The Company Stephen Bown 2021-10-26 NATIONAL BESTSELLER A thrilling new telling of the story of modern Canada's origins. The story of the Hudson's Bay Company, dramatic and adventurous and complex, is the story of modern Canada's creation. And yet it hasn't been told in a book for over thirty years, and never in such depth and vivid detail as in Stephen R. Bown's exciting new telling. The Company started out small in 1670, trading practical manufactured goods for furs with the Indigenous inhabitants of inland subarctic Canada. Controlled by a handful of English aristocrats, it expanded into a powerful political force that ruled the lives of many thousands of people--from the lowlands south and west of Hudson Bay, to the tundra, the great plains, the Rocky Mountains and the Pacific northwest. It transformed the culture and economy of many Indigenous groups and ended up as the most important political and economic force in northern and western North America. When the Company was faced with competition from French traders in the 1780s, the result was a bloody corporate battle, the coming of Governor George Simpson--one of the greatest villains in Canadian history--and the Company assuming political control and ruthless dominance. By the time its monopoly was rescinded after two hundred years, the Hudson's Bay Company had reworked the entire northern North American world. Stephen R. Bown has a scholar's profound knowledge and understanding of the Company's history, but wears his learning lightly in a narrative as compelling, and rich in well-drawn characters, as a page-turning novel.

Computer Supported Cooperative Work in Design IV Weiming Shen 2008-12-18 Design of complex artifacts and systems requires the cooperation of multidisciplinary design teams using multiple sophisticated commercial and non-commercial engineering tools such as CAD tools, modeling, simulation and optimization software, engineering databases, and knowledge-based systems. Individuals or individual groups of multidisciplinary design teams usually work in parallel and independently with various engineering tools, which are located on different sites, often for quite a long period of time. At any moment, individual members may be working on different versions of a design or viewing the design from various perspectives, at different levels of details. In order to meet these requirements, it is necessary to have efficient computer-supported collaborative design systems. These systems should not only automate individual tasks, in the manner of traditional computer-aided engineering tools, but also enable individual members to share information, collaborate, and coordinate their activities within the context of a design project. Based on close international collaboration between the University of Technology of Compiègne in France and the Institute of Computing Technology of the Chinese Academy of Sciences in the early 1990s, a series of international workshops on CSCW in Design started in 1996. In order to facilitate the organization of these workshops, an International Working Group on CSCW in Design (CSCWD) was established and an International Steering Committee was formed in 1998. The series was converted to international conferences in 2000 building on the success of the four previous workshops.
